

Neuss Synchromodal

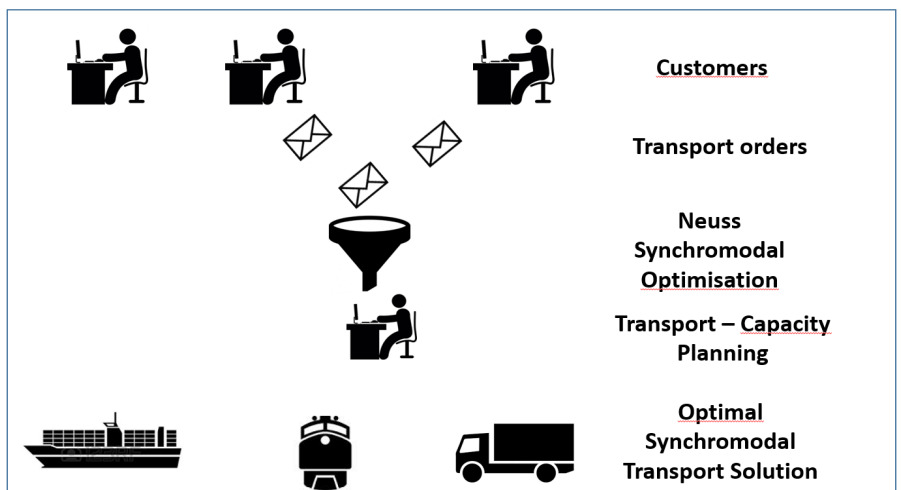

NEUSS SYNCHROMODAL

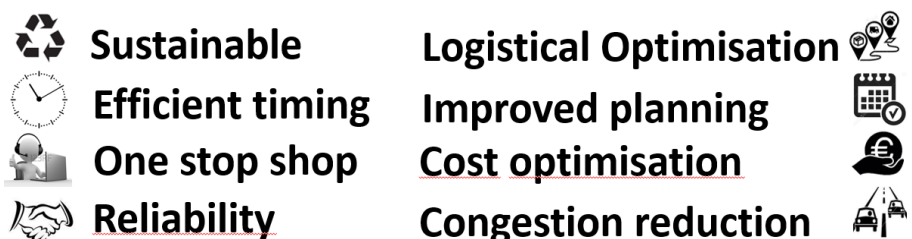

As shipper you are interested in a simple, reliable and cost effective transport solution, while at the same time reducing your carbon footprint and workload for your company.

Optimodal Nederland B.V. and the HTS Intermodal group have developed a synchromodal service offering you a reliable and efficient synchromodal service between Rotterdam and Neuss v.v., relieving you from having to do the “shopping” yourselves. Both these companies are intermodal operators since long and have initiated a combined service integrating their barge and rail services in such a way, that the shipper can be relieved from the transport hassle by sending a transport order to either one of these offices. These operators will then choose the best fitting mode of transport to meet the requirements of the shippers by using either rail, barge or long haul truck, meeting the shipment's requirements such as transport date, environmental impact, dwell times at deep sea terminals etc. By using our synchromodal service your organisation can concentrate on its own core business, adding value to your own business model.

Both partners are ready to receive your synchromodal transport orders in different formats, preferably using the EDI modes available. The Transport Management Systems in use, backed by experienced dispatchers and close cooperation between both partners, will select the optimal transport mode per individual order on the basis of above referred pre-selected criteria.

SYNCHROMODAL ADVANTAGES
